ACADIAN HEALTH: YOUR PATIENT CARE PARTNER

Enhance your existing hospice healthcare services with Acadian Health's patient-centered healthcare at-home.

When you're unable to respond, send our trained personnel directly to the patient, wherever they are.

We assist hospice organizations in meeting their goals and reducing preventable ED visits by:

- Arriving at the patient's bedside when hospice RNs are delayed.
- Utilizing the patient's comfort kit to support pain management.
- Utilizing advanced life support clinical protocols and access to advanced medication formulary to manage acute and chronic conditions safely and effectively in the home.
- Determination of death with a hospice physician via telehealth.

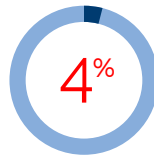

Working with Acadian Health helps reduce hospice revocation and ambulance transport, keeps you engaged with your patient, and helps the family with comforting care.

Partnering with Acadian Health allows your patients to be seen and clinically supported in the comfort of their home, just as intended.

The outcome?

Vastly improved patient satisfaction

Hospice revocation as low as 4%

A consistent continuum of care

Acadian Health's specially trained clinical team members provide acute care treatment in the comfort of patients' homes for a wide array of medical conditions, including:

Ear, Nose, and Throat

- Cough
- Cold / Flu / Fever
- Sinus infections
- Strep throat

Cardiology

- CHF exacerbation
- Edema

Pain Management

- Comfort pack
- Non-narcotic pain management

Respiratory

- Asthma exacerbations
- Bronchitis
- COPD exacerbations
- Coronavirus
- COVID-19 rapid tests
- Shortness of breath
- Pneumonia
- Upper respiratory infections

Wounds

- Skin tears/lacerations

Gastrointestinal

- Constipation
- Dehydration
- Diarrhea/nausea/vomiting
- Diverticulitis
- Food poisoning

Genitourinary

- Urinary tract infection (UTI)

If it is determined that the patient does need transport, Acadian Health's sister company, Acadian Ambulance, can provide reliable transport to an in-network or partner facility, allowing you to control the care path.
