ACADIAN HEALTH HOSPITAL AT HOME PROGRAM

Bringing hospital-level care home

Acadian Health's mobile community healthcare team offers quality at-home healthcare services for hospital partners engaging in hospital at home programs and services.

Partnering with Acadian Health allows your patients to be seen by trained community-oriented clinicians who engage in patient-centered care, ensuring that providers are informed of the nuances of each patient, their environment, and their social needs.

HOSPITAL AT HOME CARE

We support round-the-clock comprehensive care that may include on-demand critical care, daily rounding, on-site advanced diagnostics, and more.

We work directly with the hospital system to support patients and their caregivers who qualify for hospital at home services. The average patient duration is 3-5 days, but we can provide care for as few as 1-2 days. We have a robust quality assurance/quality improvement program based on IHI Quality and Safety programs that we use to identify and collaborate on program improvements in safety, quality, reliability, efficiency, and cost containment.

TRANSPORTATION

At the request of the health system, Acadian Health may obtain additional insurance coverage to provide patient transportation services.

COMPLEX IN-HOME PATIENT CARE

Acadian Health works with health systems who have risk-bearing contracts and are looking to improve patient satisfaction or reduce unnecessary use of facility-based services. We provide the capacity to support complex patients with an on-demand emergency department at home, infusion capabilities, and other high-need, high-cost in-home patient services.

SERVICES

Vascular Access/IV

- Peripheral IV insertion, removal, dressing change
- Central venous catheter, sterile dressing change and medication infusion
- Midline catheter infusion, sterile dressing change, removal, lab draw
- PICC line catheter infusion, sterile dressing change, lab draw
- Implanted port line infusion, dressing change, lab draw

Wound Care

- Dressing wounds
- Documenting wounds
- Taking photos and measurements
- Sterile dressing change
- Staple or suture removal

Labs and Point-Of-Care Testing

- Utilize Siemens epoc® blood analysis system device, draw blood, and provide lab results right away
- If the patient has acute needs based on lab results, the hospital team can act immediately and provide direction on treatment

Ultrasounds and Imaging

- Butterfly ultrasound guided vascular access
- Bladder scans can determine urine levels in bladder
- Post-void residual measurement via ultrasound

Medications

- We work with the hospital team to build out our medication formulary
- We supplement the patient's pharmacy medications when needed
- Infusion pump and flow control device
- IM injections
- SQ medications
- MDI administration
- Nebulizer administration
- IV infusions
- Intranasal medications

Cardiac Monitoring

- Sapphire infusion pumps and flow control device
- 12-lead EKGs are ordered by hospital physician as needed for symptoms or to monitor effectiveness of medication
- Results are sent directly to the hospital system for the cardiologist to analyze

Patient Monitoring

- Our mobile health team members provide in-home assessments at least twice a day
 - Blood pressure
 - Pulse
 - Heart rate
 - Oxygen saturation
 - General appearance and personal health outlook
- We support the hospital team each step of the way to provide safe, quality, and reliable clinical care that meets or exceeds patient expectation
 - Assist patients in medication adherence
 - Complete evaluations on other symptoms
 - Provide patient education on equipment and/or supplies to ensure better long-term adherence
 - Identify environment and social determinants of health and collaborate with hospital and health plan case managers
 - Ensure the patient has follow-up appointments with their PCP and specialist(s) following discharge

COMMITMENT TO EXCELLENCE

Acadian Health strives to support each health system as a partner, not a vendor. We listen, learn, communicate, and collaborate to ensure our partners meet their metrics of success—both clinically and financially.

Each Acadian Health project lead is passionate about patient care and program success and will act not only as your local point of contact, but as our clinical team lead, ensuring program efficiency and that your patients are treated with the utmost clinical care and compassion.

REPORTING

Our clinical team is encouraged to engage in rounds on a weekly basis and complete and review a SWOT analysis. We work with the health system to develop a customized reporting schedule and provide reporting to key stakeholders.

HOURS OF OPERATION

Our team members are on call 24/7.
